Meter with Relays Max – Min

Meter relays, with upper or upper/lower limited pointer in the meters for current, voltage, power, power factor or frequency and insulation indication is used for an alarm or a trip signal. (And the position of pointer is adjustable according to each usage.)These meter relays are used for automatic control.

The "Hi " and "Lo " pointer setpoint have each detecting system by opto-light source and opto-light receiver. If the metal strip attached to the indicating pointer intercepts this light path, the photo transistor in the opto-light receiver changes to activate collector current. This change in current is converted to alarm signal, then used to drive the auxiliary relay via the comparator and switching circuit. Output signal are retained once the indicator passes the "Hi " or "Lo " preset point, until it comes back to the preset point.

- Front Dimension 110x110 mm.(4.5inch)
- ANSI C39.1, JIS C1102, JIS C1103
- Polycarbonate, self extinguishing and drip-proof per UL94V-0
- Rugged housing-non combustible, plastic-heat resistance.
- Excellent readability with higher reliability
- Wide angle scale to embossed reading area eliminate reading error
